SUMMARY

Full-stack developer, passionate about programming, solving problems, and enhancing user experience. I have been working remotely as a Frontend Developer for the last 2 years with technologies like JavaScript, ReactJs, HTML, and CSS, among others. I've been building high-quality software, by working and collaborating with the design and product team to understand the problems, solve them, break down the goals, and work with Agile methodologies in sprints of two weeks. Currently, I am looking for new challenges in terms of product development, and the opportunity to apply my skills to build robust applications.

SKILLS

PROGRAMMING

HTML5
CSS3
JavaScript
TypeScript
ES6
C#
NodeJS

FRAMEWORKS

ReactJs
NetxJS
Tailwind
MaterialUI
Storybook
Flutter

EMPLOYMENT

DEVELOPER IN SOFTWARE PROJECTS - FRONTEND ENGINEER

Koridor Inc. | September 2023 - Currently

- Frontend Development process in different mobile applications among which is the ability to manage their residencies and properties to search, filter and book amenities like using the gym, parking, and going to events, among other features. Using technologies like Flutter, Flutterflow and low code solutions like Weweb.

Amelia Virtual Care | July 2021 - May 2023

- Build a user interface components library with tools like ReactJs, TypeScript and Storybook and Implement these components in the main and Admin (intranet) application providing reusability and better organization of different components in multiple projects.
- Development of onboarding functionalities of the platform app introducing new users to the app feature and functionality achieving user satisfaction and improving engagement, usage, retention and reducing the cost of customer support.
- Refactor UI components that were built in Bootstrap and switch to TailwindCSS improving performance and allowing customizable and accessible design.
- Migration of intranet React app from Webpack to Vite resulting in faster development times, faster build times, smaller bundle sizes, and improved performance.
- Ensure that the platform is responsive and compatible with all browsers.
- Track different versions of the code and be able to work with a 100% remote team using Git for version control, and Jira for task management.

PROJECTS

- **GeoFlow Project Management system** - Full Stack web application that allows users to manage their tasks and projects efficiently. Users can create tasks, set deadlines, assign priorities, add collaborators, and track their progress. Technologies used: Express, MongoDB, Node, ReactJs, Vite, TailwindCSS.
